

How is climate change affecting our planet?

I am an amazing geographer because I can:

- Explain the impact that the Industrial Revolution has had on the Earth
- Explain how human activity has influenced climate change
- Understand the cause and effect of sea level rise
- Explain how climate change can be reversed
- Explain how individuals can tackle climate change
- Collect and record evidence
- Analyse evidence and draw conclusions

Industrial Revolution	A period of about 150 years in history from around 1750 to 1900, where Britain changed from being mainly agricultural to an industrial one, where machines in factories made things in large numbers.
innovation	Where new ideas or concepts or techniques are introduced and developed.
climate crisis	a term describing global warming and climate change, and their impacts.
glacier	A huge mass of ice slowly flowing over a landmass, formed from compacted snow
sea level	an increase in the level of the world's oceans due to the effects of global warming
reverse	To make the effects of climate change turn backwards
global warming	The process of the planet heating up.
climate change	a change in the average conditions — such as temperature and rainfall — in a region over a long period of time.
sustainable	Causing little or no damage to the environment , and therefore able to continue
